A Pilgrimage To The Birthplace Of Canada's National Park System

By Jennifer Bain

Inside the fabled cave with natural hot springs at Cave and Basin National Historic Site within Banff National Park. Jennifer Bain

For 10 000 years, people from the Stoney Nakoda and other Indigenous nations climbed down northern Alberta's Sulphur Mountain to bathe in the hot springs they knew as Minwashin. They believed the natural hot springs water was a gift from the Creator and Mother Earth and used it for blessings and healing.

Then in 1883, three Canadian Pacific Railway workers named Frank McCabe, William McCardell and Tom McCardell smelled sulphur and spotted steam rising from the ground. They descended into the cave and discovered the water, as described by the Parks Canada interpretive panel, "dissolved it was as if one was in a chamber of jewels."

News of this magical cave set off a chain of events that launched Canada's national park system.

Cave and Basin National Historic Site is set within a forest in Banff National Park just minutes from the town of Banff. Jennifer Bain

Fast forward to March and I've finally come to visit the cradle that Cave and Basin National Historic Site in Banff National Park. The popular Alberta site draws more than 200 000 visitors a year.

Anne Ahlweil, a photographer and the Parks Canada visitor experience lead, has shared "50 steps in and 50 steps out" of the cave, and to hurry and enjoy it during a lull between visitors.

I don't have to shimmy down any ladder as I would in the early years Canada boasted an entry turned in 1888. The skinny 10 crew has a low ceiling and smells like rotten eggs from the sulphur. Signs warn to watch my head and not touch the water. It's not drinkable because there are extravagant flecks of "sparkly bits and rank 'unique cultural features' to protect.

It's a challenge to pinpoint fluctuations in water flow, scientific fluctuations and glacial till without expert guidance. Sure enough, there's a sudden rise in the water and a receding platform. Looking up, I can see the sky through the vent hole that people used to climb in from.

It's 30 steps into the famous, but small, cave and 30 steps back out through a tunnel constructed in 1886 Jennifer Bain

When people wander in and quickly pack the cave, it's time to backtrack to the interpretive exhibits and take a guided tour with Ahlweil.

Walking through the tunnel into the cave provides "a sense of enchantment," according to the site's 2020 management plan, and helps people discover why it's sworn has deep, multi-layered significance. The plan also recognizes the cave and basin as "a place of healing and renewal for the thermal water environment, its importance to multiple Indigenous nations, and its rich post-contact settler history."

The Cave and Basin site is the fi rst and the lower slope of Sulphur Mountain on what Ahlweil explains is the present-day territories of Treaties 6, 7 and 8, as well as the Métis Homeland. It's important to recognize the Indigenous Peoples who were fundamentally harmed when their traditional land was taken over by the federal government.

A visual display for those, sensory wishes credited with rediscovering the cave at Minwashin springs Jennifer Bain

After those three men hopping build a railway across Canada stumbled upon the cave, they reported having congregated by the "sweet bath" in "warm and tropical waters." As William McCardell wrote in *Reminiscences of a Pioneer*, "the explorers searching for the mythical fountain of youth could have found it here." Within days, the trio had staked claims to the land around the cave and basin and petitioned the government for the rights to develop the land. It came to be known as Banff's first "ticket." Eventually, the prospectors lost and received settlement money.

On May 25, 1885, when Canada was not even 20 years old, Prime Minister Sir John A. Macdonald set aside 26 square kilometers (10 square miles) of land to protect the thermal springs and called it the Hot Springs Reserve. It was the first piece of land protected by the federal government and the start of Canada's first national park, which was later renamed Rocky Mountains Park and finally Banff National Park.

The move was largely inspired by the hot springs at the Arkansas Hot Springs and Yellowstone National Park, which became a world first when it was established March 1, 1872.

A visual display for the Indigenous people who have known about the cave and thermal hot springs for thousands of years Jennifer Bain

The entry turned was the first order of business so people could walk, not climb, in. Then the pools were stabilized and two bathhouses and a caretaker's cottage were built as the first national park buildings. A bathing pavilion and open-air swimming pool were added in 1914.

The pavilion was dazzling, while the pool was the largest of its kind in the country and boasted decks with mountain views. It was made of locally quarried limestone and concrete with arches, expansive, distinctive black-and-white tiles, became a signature architectural style in Banff.

By 1958, the cave and basin site was a major attraction — "an important place where Canadians could learn about their natural heritage," according to the 2020 plan. Swimming in the spring waters and enjoying recreational swimming and bathing " according to Parks Canada.

The Story Hall, beside the entrance to the cave, tells the story of the site and the creation of Canada's national park system Parks Canada

National Historic site status was granted in 1981 to honor the birthplace of Canada's national park system.

The site is minutes outside the town of Banff and encompasses the cave, original 1916 hole, bathhouses and the Cave and Basin Centennial Building. The latter houses the theatre and gallery and below the bathrooms, bathing pavilion and caretaker's cottage.

There's now a Welcome Building, gift shop and orientation plaza by the parking lot. The Bathing Pavilion Complex contains the historic Bathing Pavilion building, cave and spring pool (closed since 2017). Gatekity building, and a large outdoor deck used for programs where the swimming pool once stood. Interpretive panels are found throughout the site, and Ahlweil says there's a plan for immersive panels about conservation, a place for sharing stories about people and the land."

The pool is being paved and there have been plans for decades to restore the pool and bring it indoor. Jennifer Bain

Understandably, the site has become more thing to many people.

"For numerous Indigenous peoples, Cave and Basin is a sacred place," the management plan reports. The Parks Canada 2 has high symbolic value as the birthplace of Canada's national parks, for the local community, it is a place to gather for events and relax with family and friends. For the local business operators, the site is part of the tourism industry's economy."

The day that I visit, curious visitors from far-flung countries are dabbling in cutting and looking during a small winter carnival.

Cave and Basin's penultimate offer Skate Canada ice and lawn skate was filmed event by the sport where the Canadian Olympic and Paralympic hopeful train and where the season ice skate. Parks Canada

On tour with Ahlweil, I read a sign that maps the fi rst organized sport competition hot springs: "This is no ordinary water. Just as it oozes from the ground through powerful lakes becomes clothes, this stream of water has been a source of magic in the earth to become warm, mineralized and slightly radioactive — hot springs water."

In 1968, models arrived from all over the world for treatment. By 1998, the sulphur waters were said to help with skin diseases, gout, chronic rheumatism, sciatica, stiff joints, gunshot wounds and nervous and soul poisoning. By the 1980s, the medical claims were being challenged, but people still believed that hot springs baths helped with muscular problems and relaxation therapy.

Parks Canada's Anne Ahlweil stands outside at the original bathing pool closed over a panel for the cave at Cave and Basin National Historic Site. It is the original cave and bathing pool. Jennifer Bain

It should be pointed out that you can no longer swim here or even stick your finger in the waters that protect a fragile ecosystem. Instead, you must drive 10 minutes away to the outdoor pool at the Banff Upper Hot Springs. It's a 1930s pool that's been restored and reopened.

Still, I'm happy I went to the cave. When I returned home in September, I received an email from Ahlweil's information exhibit. I'm confused. Then I learn how some immigrants from countries with which Canada now at war were sent to internment camps in places like national parks. One of those camps was here at Cave and Basin.

The area by the lower boardwalk is a bathing and wildlife hotspot. Jennifer Bain

My pilgrimage to the birthplace of Canada's national park system ends outdoors on aging boardwalks with fading interpretive panels — something the management plan hopes to tackle — as I take in the thermal waters, wetlands, and hints of the cave and remnants of the first hotel.

The warm water of the marsh attracts birds like the Killdeer and Robins that would normally be adult in the winter. The boardwalk is also a popular spot for wildlife, like the Yellow-Rumped Warbler that was introduced to stay from the United States by snowcaps in May. The Banff springs does not have immense that only lives in these warm waters, is nowhere to be seen.

There are areas just off the boardwalk that are out of bounds to protect a wildlife corridor. But one species clearly didn't get the message to stay in the areas to keep them humans. Elk are regulars in the parking lot, to the delight of those who think they're just coming here to see elks!

Support National Parks Traveler

Your support for the National Parks Traveler comes at a time when news organizations are finding it hard to find reliable sources of funding. Traveler's work is not only independent but unique. With the Traveler, you're not just getting the news from the front lines of park advocacy, but also in-depth analysis, commentary, and entertaining features about the parks you love. Please consider supporting the Traveler with a tax-deductible donation. Thanks to your generous support, the Traveler will have much to cover in the months and years ahead. Your gift will help us continue to provide the independent, in-depth coverage of national parks you've come to expect from us on a daily basis. Your support is greatly appreciated.
