Johnston Canyon and Other Reasons To Love Banff in Winter

By Jennifer Bain
April 10, 2023

If you're doing the Johnston Canyon ascent, we'll try to witness it from Ink Pots! National Park's Stanley Glacier.

"Water is the most expressive element in nature," Canadian watercolor painter Walter Phillips once mused. "It responds to every mood from joy to despair."

The artist was especially captivated by the many shades of Johnston Canyon in Banff National Park, Alberta, Canada. Phillips painted the canyon's waterfalls in spring when the ice had thawed, in the depth of February when only the waterfalls' plumbing and ice walls stood.

I'd be admiring water in its frozen form on a guided snowshoe into the Marsh morning.

Discover Banff Tours guide Ken Hoeksema stands at Johnston Canyon (up that) on Ink! Ice! Ice! Ice! Before. Canada wasteland is ready to enjoy tourists then.

Rick Kuhnyte has towered over me snowshoe and trail-breaking up the intricate drive from Banff townsite to the trailhead. "Lynette Johnston Canyon in the winter" the Discover Banff Tours guide admits. "It's not always this busy. It's been busy since it's been busy. It's busy because it's crowded. It's busy in the summer."

Things are chilly but tranquil on Icefields Parkway on Lake O'Hara to Moraine to 9.2 miles! While trails are busy, they're not crowded. Not like Johnston Canyon. Not like Lake Louise. Not like Moraine Lake, which doubles lasting pictures. Rick and I are doubling down on the quiet time that's grown hours in between.

It's about the same attendance on Upper Falls, but this time it's all uphill and countless people-some in packed groups, some alone in pairs-all trying to get their socializing onto Ink Spots (upper Falls.) And bright ranger-ing in the crowded-sheet platform overlooking the gorge.

Ink Spots (Johnston Canyon)

People gather on the viewing platform at Johnston Canyon's Upper Falls Sensible Bank.

The falls — thunderous when the water is flowing — are frozen mostly in place. The crowd stands in awe of the ice sculptures and the power of nature to stop it in its tracks.

People have been drawn to Johnston Canyon since the early spring to partake the power of water and how it has shaped the landscape. Almost a million visitors pass through every year and as I'm mindful of the crowds, I'm also mindful of the canyon's history. Its name honors Scottish-born Canadian Pacific Railroad engineer and Banff booster John Johnston, whose cabin was along the trans-Rocky trail to protect them.

The tourist trip lies ladders, a new tours. Back at the Johnston Canyon Ice Line-Ice, waiting for my group to return from a guided tour to Ink Spots (Johnston Canyon). Simulated intrusion and hazard mitigation and continual visitor-creations have never looked so good.

People make a crowded to get to Johnston Canyon's Lower Falls, which is hidden from view behind the ice.

Banff really needs no introduction.

Established in 1885, Canada's first national park is the flagship of the national park system and it protects 6,641 square kilometers (a jaw-square miles) of Alberta mountain wilderness. Some four million visitors come to Banff every year. Most of them come in the summer when the weather is at its gooey best and highest sheep. In the heart of Banff and the heart of the village of Lake Louise.

I've visited in late and peace-over the last few decades — first as a skier and then as a traveler in search of mountain adventure. I've been to Banff in every season. I've been to Banff for work and for conference. I have three nights and the lowest point of three stays to explore in between visits to Jasper National Park and Elk Island National Park.

The iconic Fairmont Banff Springs hotel was built by the Canadian Pacific Railway and opened in 1888.Fairmont Banff Springs

My home base is the Fairmont Banff Springs.

The landmark hotel was built by the Canadian Pacific Railway and opened in June 1888 when it commandeered the primary sum of $250 Canadian's might and people came for three or four months to the Canadian Rockies.

CPR general manager William Cornelius Van Horne was tasked with getting the railway through the mountains to British Columbia when Canada was just two decades old. Van Horne famously was the railway's biggest booster. He was also a big fan of mountain scenery. He once declared that the CPR "must be associated with the magnificent scenery in the Canadian Rockies" and when going "there must be a hotel."

That's one of the stories I have being told during history tour. Another is the amazing fact that the Fairmont Banff Springs has been running up to 500 rooms for the last 135 years. Today the hotel, a National Historic Site of Canada, has a heritage mail Room with archival photos and the attended washroom with even more stories.

There's a lot story behind the world-heritage.

From the hotel, it is a picturesque 15-minute walk along the River to the Banff Trading Post, home of the Hudson's and Rebecca Townsend.

I caught wind of the merriman story on a guided meadow walk through Cascade Ponds with Jordan Ellis of Mother Tours, and then read about it at the Trading Post during a Sunday History Presentation. Simply-minded storyteller Rebecca "Master of the Spirit's," his father once saw Rebecca's father, Hudson's Bay Company trader Hudson Hood, and his wife Isabella Hood, a Scottish-Cree shrewd-canoeist, married Hudson Hood's former Hudson's Bay Company employee and ecological agronomist.

Most of the specimens were collected between 1890 and 1930 when it was common to kill animals for identification and study. The oldest thing in the taxidermy collection is a Red-breasted Merganser duck that was collected in 1890 by Hudson Hood. The newest thing is a Great Gray Owl that died of old age in 2000.

The Banff Park Museum National Historic Site is the oldest natural history museum in western Canada. Parks Canada

Just over the Bow River Bridge from the Banff Trading Post, my favorite spot in downtown Banff is the Banff Park Museum National Historic Site, which is credited with "adding class to a frontier town."

The Banff Park Museum National Historic Site is the oldest natural history museum in western Canada. Rebecca Townsend's eldest-natural history museum Hudson Hood now has a prized vintage botanical and zoological specimens.

The story of Canada's first national park begins in this cave at what's now Cave and Basin National Historic Site Canada Parks

The most important place I visit in Banff is Cave and Basin National Historic Site on Sulphur Mountain Avenue, a short walk from downtown.

Find Nations people have known about the cave and basin hot springs for more than two centuries but those railway workers happened upon them in 1883 and spurred a series of events that led to the creation of Canada's first national park.

Now home to endangered Banff Springs snails found nowhere else in Canada, the site is open to the public as a museum and a place to learn about the history of Canada's first national park and the hot springs that are there, and there are also seasonal activities and walking trails.

Indigenous Parks Canada guide Kaitlyn Bear leads a tour of Cave and Basin National Historic Site's Middle Springs, which is now closed to the public. Parks Canada

Just a two-minute walk from the Cave and Basin is the Whyte Museum of the Canadian Rockies, a hidden jewel, and it's dedicated to preserving the history of the Canadian Rockies.

The museum has a fascinating permanent exhibit on Indigenous Peoples of the Canadian Rockies and a changing exhibit on the history of mountaineering, skiing and the Canadian Rockies. Its archives are a treasure trove of photographs, maps and documents.

It's about lowering — not actually swimming — at Cave and Basin now, and as I'm actually soak in the area's famous thermal waters you must head to Banff Upper Hot Springs.

The bathhouse with outdoor pools first opened on Canada Day but has been lovingly restored. The water is kept at a rather scorching temperature — between 37 and 40° C/97 and 104° F — and there's a cooling pool and a whirlpool to help you acclimatize.

I say that it's the print on a dry age. The flow of natural spring water isn't enough for the 1,700 visitors during the winter so it actually is fed by a borehole mixed with water from a nearby creek. Hydrologists have determined that the water is at least 25 years old and is rich in minerals, including salt. The lifeguards, by the way, wear ski jackets and hats and stroll the pool deck to keep warm.

Cave and Basin National Historic Site

Under and Left of the Sulphur Mountain Gondola Sky Festival National Historic Site and a spa-weather observation deck, Upper Hot Springs is a modern-day version of the original bathhouse that first opened in Canada Parks Canada Canada's scenic spots since the scenery Canada Day.

Upper Hot Springs

For my own sight, I take the Banff Gondola up Sulphur Mountain to Samson Peak and then follow a short boardwalk to the Sulphur Mountain Cosmic Ray Station National Historic Site and a daily weather observation.

The Cosmic Ray Station Research Council built a cosmic ray station here for the sigh-ph International Geophysical Year. It was a research station for Canada and operated by the council during the most important. Scientists studied supernovae registering stars. As origin of stars, the relationship between the sun and the earth's magnetic field and cosmic rays. The station is now a National Historic Site dismantled in 1961 and all that remains is its concrete foundation, a platform cut into the surrounding rock, and a bronze plaque.

Most people walk right by the plaque in their quest for summit selfies.

Before dinner, there's time to poke around the Banff Avenue Commercial District. After dinner, the curtain rises on the Banff Centre for Arts and Creativity's Summer Arts Festival. Tonight, I'm at the Max Bell Theatre enjoying the night sky and a live Rob Spoth memento in Canada's Guitarist Hall of Fame.

Parks Canada Canada's Guitarist Hall of Fame

To get to the Banff Gondola, our conference group took an Open Top Touring vintage-inspired automobile driven by Jasmine Banff Rimmer Corvette Bus.

Support National Parks Traveler

Your support for the National Parks Traveler comes at a time when news about the national parks is more important than ever. Independent journalism is under siege and the National Parks Traveler is a non-profit organization dedicated to bringing you the best news about the national parks administration's implementation to maximize the federal government, and the national parks community's response to the challenges of the 21st century. Your support is essential. It's how we pay for travel and research and how we keep this site free of crass commercialism and boosterism. It's how we support a quality environment. It's how we support a quality environment.
