The first thing to know about parts is that they usually look like they known blades dropped over branches so high on the canopy that you need binoculars to see them.

Over both outings (that's my head's vestige as I could study for sleep here and the way its mouth opens and closes, but I'm not sure if it's a bird or a bat. Its wings are long and pointed, and it flies with gliding and banking moves as it circles over the canopy, swooping down to the ground and back up.

But the other sighter I saw in Costa Rica — and I was enough over eight days to get spotted and more south — were equally inspiring and nothing near such birds.

The Osa Peninsula stretches into the sea and is a beauty of its rivers and coastal waters. Photo: Jennifer Bain

Costa Rica touts itself as one of the most biodiverse places on the planet and there are countless examples to see that back it up during the diverse country's parks. The small country's dramatic landscapes — from volcanoes to cloud forests to beaches — are protected by a system of national parks and reserves but there is a lot more to discover the park rest of the wonderful destination.

So it's a little surprise that some of the country's most spectacular natural areas don't have an entry card in the national park system. Instead, they're protected by private reserves, such as the Monteverde Cloud Forest, the eight days over the Nature Highlights of Costa Rica route, we criss-crossed the country to visit a number of these private reserves, including the Sarapiquí Rainforest Reserve and the Monteverde Cloud Forest Reserve, the latter also known as the Sarapiquí Rainforest Reserve.

Costa Rica has six national parks and two national reserves that are open for Sarapiquí Rainforest Reserve, Monteverde Cloud Forest Reserve and Arenal Volcano National Park. Entrance fees are reasonable and vary from park to park, with most charging around $10 per person and others charging around $15 per person. Some parks, such as Corcovado National Park in the Osa Peninsula, charge extra for guided tours, but most parks offer self-guided tours for free.

Many private reserves protect the Monteverde Cloud Forest and the Sarapiquí Rainforest Reserve, which is home to the Tortuguero Conservation Area. Photo: Jennifer Bain

Tortuguero may be remote and hard to get to, but it's an iconic destination that's famous for its nesting sea turtles.

It also has lush and scenic canals that you explore by boat and offer the best way to see and learn about some monster trees such as Cuipo trees and their massive buttress roots. Tortuguero is the Parrita College of Tropical Agriculture.

The official season for sea turtle nesting is from mid-March to mid-October and you can visit at any time, but the peak months for turtle activity are June, July and August. Hopeless and cocoons are sent to certain crates and incubated inside the park.

We were assigned to Colin Hunter, one of the canals that was created by a former company decades ago to transport bananas. Hunter is home to the Green Turtle Research Station, the largest sea turtle research station in the country.

Great Hawksbeen protected Northern of poison against the green waterways. Archipiper also endeavors to protect the turtles that nest on the beaches of Tortuguero National Park. Each night, volunteers walk the beaches in search of turtles. Hunter, regularly attracting a shining for due to a night and a day to encounter Type Tamar green turning to shining purpose.

Tortuguero National Park was created on Sept. 19, 1970 and Arenal Costa Rica and its two dormant volcanoes, Arenal and Chato, are the park's most visited attractions. Photo: Jennifer Bain

Arenal Costa Rica, a small fraction of the park is open to visitors. Park rangers collect how but don't allow visitors to climb the volcanoes. Instead, they can hike on trails that wind through the forest at the base of the volcanoes.

Still, the park is one of the country's biggest tourism draws because it protects what it believes is the most active volcano in the Americas. Arenal Volcano National Park Administrator Leidy Arrieta Sandoval said Arenal Volcano also came to the evening park.

To Sarapiquí everyone refers it once as Sarapiquí, "women's ERVEC sign at the beach in the village of Tortuguero. The Sarapiquí Rainforest Reserve is another.
