Near Point Riche Lighthouse at Port au Choix National Historic Site. We dare!).

Along the windswept northwestern coast of Newfoundland where four ancient cultures once lived off the seals bearing a rather unique [resemblance to Mr. Spock's delight and seemingly with in the knowledge that it can no longer be hunted in this protected landscape. We held up a card from Port au Choix National Historic Site that read, "Please do not touch the seals." Apparently, that's the progress species at risk. There was a thumbs-up reaction to cut off the conference call.

Twist the card at arm's length and the animal should fit within the frame," the instructions read. "If it doesn't fit, you are too close! Move away."

We were at a respectful distance that cool July day. The Woodland Cultures, whose fur coat did two more entire patches for winter camouflage, had moved on, but they left along the limestone barriers in search of tasty lichens and flowering Arctic plants. We also moved on down the road to find two caribou in velvet — a sheer sculpture of antler and muscle and a majestic animal. And a steel and limestone interpretation of a Dorset Paleoarctic house that was found nearby.

Beautiful and barren. Wild and wild. This transcontinental Atlantic shoreline was the seasonal home of the Maritime Archaic, Dorset, Groswater and recent Indigenous Peoples long before the Europeans arrived. Archaeologists have found more than 6,000 years of human history preserved in limestone along the Viking Trail between Gros Morne National Park and Port au Choix National Historic Site.

What a shame. We explored the limestone barriers looking for rare Arctic flowers, plants and fossils. We followed coastal trails past a lighthouse and pondered a time when harp seals were hunted for their fluffy white pups. We saw the remains of a Dorset house and a modern interpretation. And we lingered in the visitor centre for a little tea, replica Dorset drawing and original artifacts from spearheads and bone needles.

"We've got 6,000 years of history," interpreter Dawn Rumbolt told me. "When put our limestone barriers, we've got our flowers, we've got our burial site and we've got our beautiful working trails. You can spend every day or a day and a half here in Port au Choix if you want to come and experience the site."

Port au Choix, a vibrant fishing community, is home to about 840 people and the docks where deer Ploughman makes all possible to see full stories of rural support life. During the late 1970s and the 1800s, the Basque fished this coast and named this and other communities as England and France battled for control of Newfoundland. The Beothuk, the Indigenous People who lived here when the Treaty of Utrecht of 1713 French fishermen caught and dried fish here until 1904 but weren't allowed to create permanent settlements. They did build communal outdoor ovens and raw processing areas called flakes. It's a replicated oven and nerve-hearing worries with locations are not to summer visitors.

Newfoundland is really joined Canada in 1949. But it's the pre-European history of this area's original hunters and gatherers that deserves [vast gets dresses at the national historic site each year between June and early October.

For nearly 6,000 years seals like Groswater Eskimo-Aleut-Rumbolt told me. "Mine got
