Delving Into Red Bay's Whaling History In Labrador

By Jennifer Bain

Heritage presenter Wanita Stone at Red Bay National Historic Site in Labrador.Jennifer Bain

In a tiny fishing village in Labrador, the story of the heyday of Basque whaling is told through ancient whale bones and mouthwatering fish delicacies that are cooking over the coals outside. But, to be honest, you really need a good imagination to fill in some of the blanks.

When I arrived at Red Bay National Historic Site, I went straight to the Parks Canada visitor interpretation center where heritage presenter Wanita Stone eagerly showed off tiny vials of whale oil, one puffiest and one naturally rendered and as shiny it looks like liquid shell.

She stood by a replica "coopers" that shows where whale blubber was rendered into oil in large cauldrons and then stored in barrels. Each barrel was made by a cooper who shaped the wooden staves and covered with red clay. Stone brought them around for guests to give stability to the whaling ships.

"You'll see the tides along the shoreline when you go to Saddle Island," Stone promised. "There's still bits over there."

Red Bay is considered the earliest, most complete and best-preserved example of early industrial-scale whaling in the world. The National Historic Site is part of the larger Red Bay Basque Whaling Station, a UNESCO World Heritage Site that includes bluffs around the harbor, islands, shoreline and a buffer zone in case of future archaeological finds.

During the mid-16th century, an abundance of whales drew men from the Basque region of Spain and France to the Strait of Belle Isle, where they established a major whaling port at Butus Island—named Red Bay by the French and Pitts Harbour by the English. For 70 years, Pedro Canals became the most powerful Basque whaling boss during the 1560s. He owned ships, a warehouse and a mill at the end of the century in Europe.

The North Atlantic right whale and Greenland right whale were broken on the boneheads were slow moving, easy to approach, floated when killed and yielded plenty of oil and baleen. Highly prized whale oil burned brighter than vegetable oils, and was used to make soap, paint and varnish.Baleen—a strong, flexible material found in the mouths of baleen whales — was used for corsets, hoop skirts and other products that required elasticity.

When the whalers arrived, they mainly lived on their ships and their coopers would immediately start to assemble wood barrels that had been brought from Europe in pieces to save space. They set up tryworks on land, where the fat was rendered into oil. Whale meat was also processed and boiled to cook water to further purify and cook before being poured into barrels and stored on the ship for the return voyage to Europe.

During the peak whaling decades, nearly a thousand men worked out of Red Bay alone.

By the final years of the 16th century, Basque whaling in Canada began to decline due to overhunting, climate change, the discovery of new whaling grounds at Spitsbergen, Norway and changing political circumstances.

A portrait of historian/geographer Selma Barkham hangs at the Red Bay National Historic Site because she helped reveal the history of Basque whaling in Canada.Jennifer Bain

From there, the whaling story barely faded away for more than 400 years until Canadian historian and geographer Selma Barkham diligent work kick-started archaeological research at Red Bay.

From 1977 to 1992, numerous high-profile plane on land and underwater Archaeological research excavated remnants of 20 whaling stations along the shore. Underwater research led to the discovery of three Basque galleons and several small boats. The biggest finds were the San Juan, a Basque galleon that sank in 1565, and primed beneath it a smaller boat known as a chalupa.

The chalupa, about 46 feet long and almost seven feet wide, is considered one of the greatest archaeological discoveries in Canada. Designed to handle strong tides and high winds, this boat was hand-built in a mix of sewn — one stemmed and six sections, including hazelnuts — to allow the pursuit whales that were triple the size of their wooden vessel. They towed their catch back to the ship or to shore.

The chalupa, a Basque whaling vessel found in the Red Bay harbour on display at the Red Bay National Historic Site — it is a boating that won't respect to the public until 2025.Jennifer Bain

Spanish shipbuilders are now making a replica of the San Juan, which went down with barrels of whale oil and 150 tonnes of biscuit. The chalupa, which was found in pieces, was reconstructed, restored and returned to Red Bay.

It's now in a new visitor orientation center that is slated to open in the next year or two and replace the current visitor interpretation center.Kelly Knox, a heritage presenter, showed off the bow of the new climate-controlled building so I could get a sneak peek at the oldest living boat of its kind, which sits on racks behind a hawthorn's lower jaw bone.

Ryan also unlocked the town hall during my July visit to show off the Red Bay Right Whale Exhibit that's part of the national historic site's interpretive center. It's a fascinating display that tells the story behind long-right whales to life, detailing, among other things, how the Basque ate cultures of ocean water through their baleen plates to capture crustaceans, krill, small fish and zooplankton.

"Our whale is over 400 years old and would have measured well over 50 feet in length when it was alive," Ryan explained. "Right whales are one of the most endangered species in the world. Centuries of commercial whaling and decades of accidental deaths through fishing gear entanglements and collisions with ships have pushed right Whales to near extinction."

As I eased the boat to within a ferry back to the island of Newfoundland, there unfortunately wasn't time to walk the Bones Shore Trail on the southern side of the harbor to a beach named for the whale bones left behind by Basque whalers. But I did make it to the lookout and wait with interest that St. Regis to remove bones from the UNESCO-protected area.

Whale bones are the key a boat that I did to Saddle Island, which is part of the national historic site and where heritage presenter Wanita Stone is responsible to home to important archaeological sites that contain the remains of rendering ovens, cooperages to assemble barrels, whereas, temporary living quarters and even a cemetery with more graves.

That's not to say you actually see all those things.

Along a boardwalk, which passes a small pond as it cuts across the island, about a dozen interpretive panels helped paint a picture of the Basque whaling era. There were views of Red Bay, whale vertebrae that were used as benches and, in the distance, the ruins of a stone fort. There were also the rusted remains of a coal-carrying ship called the Bonnie that sank in 1966 after it ran aground in the ducks, gulls, wildflowers, instantaneous in the grass and one magnificent pile of red tile fragments, there was little to actually see.

"When they were excavating they catalogued roughly 50,000 artifacts underwater and about the same amount on land," Ryan explained. "Most of the artifacts on display there's stuff in the Rooms museum in St. John's and stuff up in Ottawa for study purposes."

Saddle Island, once home to seasonal Basque whaling activities. Note the shape of Red Bay and a rusted shipwreck from the sailing Labrador.Bain

As we entered, we had to dodge a construction zone once part of the boardwalk was being redone. The intention for 2024 is to build a new viewing tunnels, coopers building and other things to give visitors an immersive sense of what's gone on — a better sense of what's here. Costumed interpreters could then be stationed at strategic spots.

I did flee with Ryan's insight and by cross-referenced everything I saw with a bilingual Parks Canada pamphlet called the "Bonaue Whalers of Red Bay: A Archaeology Tour of Whales, Ships and Men." It has not with a map of Saddle Island and short descriptions of a dozen stops, like the whale-oil rendering ovens, the cooperage and the cemetery. Ryan also pointed out some of the features of a "mystery building" that seems destined to be a mystery.

"You've got to use a bit of imagination to try and figure it out," Ryan quietly acknowledged before we hopped in the skiffs boat for the quick ride back to the mainland.

Support National Parks Traveler

Your support of the National Parks Traveler comes at a time when news organizations are finding it hard, if not impossible, to stay in business. Traveler's work is vital. For nearly two decades we've provided essential information about our national parks, and we've done it without the administrations determination to downsize the federal government, and without the corporate sponsorships that support many other publications and websites. We're the Traveler. We're not beholden to anyone but you. We've been here for you for many years ahead. We know of no other news organization that provides such consistent, in-depth coverage of our national parks and preserves on a daily basis. Your support is greatly appreciated.
