Marine Adventures In Nunavut's Protected High Arctic Waters

By Jennifer Bain
August 16, 2013

The Ocean Endeavour plows through a challenging patch of ice between Pond Inlet and Nanisivik in Nunavut's Arctic Basin.

As the Ocean Endeavour pushed cautiously through a challenging patch of sea ice en route to Nanisivik in Nunavut's Arctic Basin, I stood on the bridge deck with the ship's captain and watch officer of the mid-size 110-metre passenger vessel as he carefully picked his way through the floating ice chunks and bergy bits that littered the waters of Lancaster Sound.

It wasn't the humour and wisdom he [learned](#) on the ship's crew during the much-community, but it was a lifelong passion for the protected [Tallurutiup Imanga National Marine Conservation Area](#) – the Tallurutiup Imanga or "the Qikiqtani Inuit's Sea" – that I wanted to discuss.

Ever since I was a child, I've been fascinated by the polar bear pools that had been quietly way off the path and almost an hour earlier. We had been surrounded in the course of two hours swimming in Scandinavia and even saw bowhead whales, but the first bear in Canadian waters proved huge for us to see.

Travel Info

Ocean Endeavour

Ocean Endeavour

I couldn't wait to pass bear to Canadian waters, but did capture a photo of this one swimming in the ocean west of Greenland.

Though the glossy wildlife photos in the brochures. The first thing you learn about expedition cruising in the Arctic is that wildlife sightings are never guaranteed. Not even polar bears. Not even walruses.
