

A view of the Big Flowerpot at Fathom Five National Marine Park Jennifer Bain

Perched on the rocky shore of a wilderness island in Georgian Bay lies Tobermory's biggest tourist attraction. Actually, it's not one attraction but a whole collection of them. Fathom Five National Marine Park is a submerged park that protects 19 shipwrecks and a dozen islands, including the Big Flowerpot, one of the most photographed and photogenic rock formations in Canada. Fathom Five also has a lighthouse, a shipwreck graveyard, some awesome caves and, of course, a big fish tank known as Georgian Bay.

The Big Flowerpot is a rock pillar that juts 20 metres out of the brown-painting waters of Lake Huron. It's also the oldest and most well-known of the Flowerpots signage and a UNESCO Biosphere Reserve. Approximately seven Lake Huron area fish surveyed in 1894, using gangnets (nets drawn between two boats) and seines (nets dragged from shore), were found in the Flowerpots. The Flowerpots are considered a healthy ecosystem of Fathom Five National Marine Park. Fathom Five is a perfect spot for kayakers, with sight out of a now-safely stored at the Divers and Horizons Canada in Ottawa.

The Flowerpots are now protected by Parks Canada as the iconic features of Fathom Five National Marine Park. Parks Canada is responsible for protecting the Flowerpots and the rest of Fathom Five National Marine Park. Parks Canada is looking after them and there's more to the water than meets the eye. "Maybe because they are the 'flamboyants' of limestone features," it suggests with a nod to the Dutch painter known for his theatrical use of light and color. The excitement is palpable on the faces of the passengers.
