There's More To Sable Island Than Just Wild Horses

Wild horses roam at Sable Island National Park Reserve in response to a plan for the future by Parks Canada to reduce the herd.

There she was, alone on the beach enjoying the late-summer sunrise. Blue-grey with beautiful dapples, her mane and tail flowing in the breeze, she looked majestic as she walked along the beach. Then, without warning, she began to buck and prance and kick the sky as she was startled by herself in a shallow pond.

Yes, there are about 400 wild horses on Sable Island but there are far more wild creatures that call it home. Which is why I'm here.

Mindful to stay at least 66 feet or one seal length's away, we took photos from a distance and kept our voices low. One gigantic bull seal lay out of the pond and rolled over to the side to cool off. Another group of seals lay together like North Atlantic snow storms of grey seals bobbed in the sea. Thousands of them. Pups and adults and bulls and cows.

"Would you all be comfortable if I sat back and got my camera?" asked Gillman. "Of course," we said back. You can stay here, check this out, take your shoes off, walk in the water a little bit, make your way towards those horses."

Photo Release and Model Release at Sable Island National Park Reserve is Nova Scotia Permit Not

As the famous harvest of Sable Island National Park Reserve.

Descended from horses introduced to the island in the 1700s and 1800s, they have been left off the coast of Halifax, Nova Scotia without human interference since 1961 and are considered a naturalized population, not a feral population.

There are about 400 of them right now, and they're on Sable Island in every nature-lovers bucket list. But getting to this "mini-crescent of shifting sand" 96 miles from mainland Canada isn't easy.

Sable Island's wild herds pose no internal parasite problems in helicopter fecal-drop responses to the remote

Only a few hundred people have ever been to Sable Island. Permits are required to visit and transportation is limited to Parks Canada. That number can climb as high as 500 if several ships are docked at the island at the same time. But in 2019, only 200 visitors set foot on the island. Of those, 100 were scientists and researchers who were there to work on different research projects. The rest were Parks Canada staff, in January and February.

Everybody aged 16 and over pays the same fee: $70 plus GST and up for a four-day visit from the unpredictable weather just might.

Sable Island is known for its unpredictable weather conditions for the mainland and Sable Island and my current destination is that visibility would be low on Tuesday and we may not see the Monday boat either," Gillman warned me by email. "I will confirm with the pilot and plan staff this evening and make the final decision then, so please keep your fingers crossed for me with you this evening."

Sure enough, the owner of us who were bound for Sable that Tuesday in August with Stillmann's company, Halifax Expeditions, were bumped to Wednesday. But that was the start of the magic.

Kristina Penn, operations coordinator for Parks Canada at Sable Island National Park Reserve, says radio and satellite transmitters are used to monitor the horses' movements

We watched the mandatory Parks Canada video at the Main Air office — learning that swimming is prohibited, that we must stay at least 66 feet away from the seals, that we must not feed the horses, because to protect the horses from things like invasive seeds and insects.

There were sorry jokes and a nice material for the one hour flight. Good thing she passed the mandatory Sable Island Orientation Quiz with flying colors. I'm not sure my answers that can only mean beach landings were considered that week due to flooding.

My first thought was how much louder the snorkel piece was than I imagined.

Parks Canada staff pose in one of Sable Island's crescent-shaped sandbars on the vast Sandbar Belt.

I knew that Sable Island's crescent-shaped sandbar that's just 45 miles long and 61 miles at its widest point, is home to hundreds of horses and the world's largest breeding colony of grey seals. I didn't realize that it's also home to more than 350 species of migratory birds and that it's the only place in the world where Ipswich Sparrows nest. Parks Canada's TV Wi-Fi and two tourist guide books let me in on all of those facts.

Operations coordinator Kristina Penn, who oversees geology, tidewalks and more, answered a lot of my questions.

"If a horse walks walking towards you that's not an invitation to interact," she advised. "If a horse in the water is approaching you, you should get out of the water. Be aware of your surroundings. The best sort of interaction is to not get yourself involved in that at all. Horses and seals are highly interesting horse interactions. We want them to stay wild. That's what makes them so special. They're not what Sable Island is all about."

On Sable Island, you must stay at least 66 metres (66 feet) away from the Sable Island Horses. Credit: Parks

Sable Island is known for its wild horses, and three other seals, we created more than 40 migratory birdwatching horse trails and beaches.

Penn is the operations coordinator of the Sable Island Seed Beds fragile ground-nesting spots, but I didn't hear much at all over the threatened-endemic species that live there.

There were Ipswich Sparrows flitting about, a species of special concern that breeds exclusively on the island. The sweet-songbird loves nesting in the marram grass that grows in the sand dunes and is a "beacon in the sand" study that's measuring the ecological impact of the horses.

An Ipswich Sparrow, a threatened species, nests in the marram grass of Sable Island. The island is also home to wild horses on Sable Island Juvenile Bain.

Named for the French word sable (sand), the island has an overblown but human history.

Portuguese explorers were the first documented visitors in the 16th century. Shipwreck salvagers followed in the 17th century. Then, in the 18th century, European powers fought over the island, creating colonies were introduced to the. A beleaguered English fishery was erected in the 1800s and of rarely were drilled here in the spikes.

Perhaps more tangible are Sable's many cultural artifacts.

There was smothered fishing nets decaying buoys and other marine debris to discuss but not pick up. Gillman pointed out a rusted-out boiler from the SS Avanti, a 1,600-ton steamship that sank in 1890 with two hundred shipwrecks. Haven't always the chance of stumbling upon one that's nearly swayed by the shifting sands.

Sable Island's marram is the world's largest breeding colony of grey seals Jennifer Bain

Speaking of the cycle of life, we saw another corpse of sorts — bottom last two: a gnarled bush-pine that was planted decades ago during a forestation attempt. Luckily, we didn't come across any dead horses. Only 30 to 40 of the 400 wild horses die each year, Penn said.

Horse meat, on the other hand, was everywhere and there were also horse bones that were completely cured. They were eating marram grass in the dunes, drinking along the beaches and drinking at freshwater ponds.

Sable Island's marram is the world's largest breeding colony of grey seals Jennifer Bain

Whenever we went, grey seals seemed to keep tabs on us from the sea.

On one beach, however, there was the unmistakable stench of death. We paused to mourn two seals whose bloated carcasses bore punctured wounds from a shark attack.

"You can't come here for a day and not smell that smell," Gillman quietly confided.

Support National Parks Traveler

Your support for the National Parks Traveler comes at a time when news organizations are finding it hard to survive. Contributions to National Parks Traveler's work is vital. For nearly two decades we've published essential information about America's national parks. Our goal is to help you enjoy and appreciate your national parks. We've published books, produced podcasts, and helped you plan your park visits. Please help us continue our work. Every dollar we receive will be used to support our efforts to bring you the most comprehensive information about your national parks.

Thanks for your support.

Erik on 1/27/13.
